

Zoha Rakotomalala

zoha.rakotomalala@gmail.com · github.com/zoha-rakotomalala · linkedin.com/in/ZohaRak

Studied mathematics and physics in prépa, then business, then taught myself software engineering and haven't looked back. I'm drawn to complex systems and to engineering that serves science.

Skills

Programming	Python · C++ · Java · TypeScript · JavaScript · SQL · Angular · React Native · C# · HTML5 · CSS3
DevOps & CI/CD	Git · GitHub · CI/CD pipelines · Docker · Linux · automated testing · code review
Cloud & Systems	AWS (CDK, Lambda, DynamoDB, S3, CloudWatch) · REST APIs · monitoring & alerting
Languages	French (native) · English (fluent) · Spanish · Urdu · Hindi

Work Experience

Software Development Engineer · Amazon	
XENOS / CROSSMARKET PRICING · SELLER-FACING TEAM	Paris, France Jan 2026 – Present
- Delivered a migration workstream within the 2026 regional-exit program for pricing services (4 backend services moved off a legacy AWS region, one legacy data-warehouse cluster deprecated), which cut the region footprint 82% and infrastructure run-rate by about \$48K/year, one month ahead of target - Re-platformed fee computation onto a new centralized fee engine, validating the new implementation against the legacy system through shadow testing at production scale; built reusable cross-region networking constructs, reducing later migrations to configuration changes - Used AI coding agents (Claude, Kiro, internal tooling) with earlier migrations as context to run migrations in parallel, cutting per-migration effort about 26%	
PRICE PERCEPTION · CUSTOMER-FACING TEAM	Amsterdam, Netherlands May 2024 – Dec 2025
- Designed architecture for a new customer experience involving price history, evaluating tradeoffs between real-time computation and pre-computed approaches for latency optimization - Contributed to the expansion of an existing feature implementing the European Omnibus directive in Spain and Ireland - Authored a Correction of Error on a compliance incident, driving root-cause analysis across systems and leading the mitigation - Served in the team's on-call rotation for production services, mitigating 15+ incidents - Coordinated across engineering teams to align on technical implementation standards, identifying overlap in planned experiments and facilitating project consolidation - Launched feature experiments using A/B testing methodologies to measure customer impact - Redesigned a core UI element to be scalable and versatile across different marketplaces and languages - Supervised a software engineering intern for 5 months; presented at an internal conference on Model Context Protocol and its implications for AI systems	
Software Engineering Intern · Dataiku video demo	Paris, France Jul 2023 – Dec 2023
- Developed a 1900-line feature generating and displaying foreign key relation graphs between tables: - Indexed primary and foreign keys using JDBC - Generated the relations graph with Graphviz and retrieved table information from Elasticsearch - Built an Angular component to open and navigate a modal containing the generated graph	
Data Analyst Intern · Dashlane / Spark.do	Paris, France Jul 2021 – Jun 2022
- Conducted data analysis, modeling, and visualization using Tableau, SQL Server, and Amazon Redshift: - Created a predictive model for user retention to guide the sales team - Automated weekly performance reports with Metabase and Airtable APIs, cutting preparation time 50%	

Education

Triple Degree — EDHEC SKK GSB UC Berkeley	Sep 2019 – 2023
Global Economic Transformation & Technology (GETT)	
Haas School of Business, University of California, Berkeley, USA — Diploma in Global Economic Transformation and Technology (Aug 2022 – May 2023) SKK GSB, Sungkyunkwan University, Seoul, Republic of Korea — Master in Management Studies (Jan – May 2021) EDHEC Business School, Paris, France — Master in Management, Full English track (Sep – Dec 2020)	
Relevant courses: Data Analytics, Web Development, AI&ML for Business, Cryptoeconomics and Blockchain Technologies, Data Structures, Genetic Data Automation, Introduction to C++ and Python, Data Science Applied to Finance	
Lycée Saint-Louis	2017 – 2019
CPGE MPSI/MP · INTENSIVE TWO-YEAR PREPARATORY CLASSES IN MATHEMATICS AND PHYSICS FOR THE COMPETITIVE ENTRY EXAMS TO TOP FRENCH ENGINEERING SCHOOLS (GRANDES ÉCOLES)	
- MPSI: Mathematics, Physics, Chemistry, Engineering Sciences, Computer Science - MP: Mathematics, Physics, Chemistry, Computer Science	

Projects

Palette — Cross-Platform Mobile App (React Native / TypeScript)	2025 – Present
Personal side project · repository · site	
- iOS and Android app to search paintings across 14 museum APIs (the Met, Rijksmuseum, Art Institute of Chicago, and more), curate a personal collection, and build a shareable palette of favorites - Offline-first architecture with cloud sync (Supabase auth and Postgres, Zustand and MMKV storage, an offline operation queue with conflict resolution); full test suite running in CI on GitHub Actions	
2D Tactical Role Playing Game (C# / Unity)	Apr 2023
Game Design and Development course · itch.io · repository · trailer	
Led a cross-functional team of artists and developers; implemented an A* enemy AI and a full turn-based action system	
Protein-to-DNA Sequence Transcriber (Java)	Dec 2022
Genetic Data Automation course	
Probabilistic translation from amino-acid sequences to codons, with edge-case handling and validation against biological-rule checkers	

Interests

Technology	Discovering new technologies, especially AI; coding and learning new techniques for fun
Reading	Across genres: fantasy, science fiction, dystopias, non-fiction, and sociology
Art	Museums, art history, and paintings
Video Games	RPGs and strategy games
